Have you wondered how many sensors one might need to enable touchless interaction, environmental sensing and positional tracking for VR? **Visit our meeting room and find out.**

Hint: The number of sensors is smaller than two.

AND BY THE WAY: 3D scanning works as well. And Augmented Reality. And ... well, better come and find out for yourself.

Please get in touch with us to fix a meeting using events@pmdtec.com or 3d-imaging@infineon.com
